

## Automatic bottle labelling machine

Automatic bottle labelling machine is designed to put self-adhesive labels onto various bottles. Machine is suitable for self-adhesive labels from reel, with max.  $\varnothing.220\text{mm}$ . The maximum label roll height is 150mm, higher sizes are available on demand.

The positioning height of the labelling units can be easily adjusted. The labelling units can be quickly set to apply labels with different sizes and shapes.

### Output: 1.000 bph – fixed speed

- Machine has safety covers made from plexiglass.
- One labelling station for application of self-adhesive body label (max paper passage H.150mm).
- Machine has infeed separating cylinder – no need to change components for different bottle sizes.
- Labelling unit's motion is done by a stepping motor.
- Speed of labelling unit is synchronized with the speed of the filling machine.
- Labelling unit is supplied with a loading plate for a roll  $\varnothing.250\text{mm}$  max.
- Machine has a touchscreen panel for adjusting the labelling settings.
- Machine's base-frame is completely covered with stainless steel plate.
