

Fruit and vegetable washer elevator mill DOSIMILL

Fruit and vegetable washer-elevator-mill with dosing unit is designed for washing and milling various products as well as dosing the grinded mash into hydraulic press or destoning machine.

The dosing unit detects when the unit is full and stops the machine for pouring out the mash. After emptying the unit, machine continues the washing and milling process automatically.

Output – 1000 kg/h

- The crushing head of the machine is round, so all the crushed mash goes directly out for further processing. This feature significantly helps when washing the head as there are no corners.
- Our round shape technology is superior to other producers', because a lot of fruit mash gets stuck in the corners of square-shaped heads for hours and can cause juice fermentation!
- The dosing unit has a sensor inside which detects when the unit is full and stops the machine.
- Machine has additional table in front of the basin for putting fruits or boxes on it.
- V form washing basin helps fruits and vegetables move directly to the elevator, therefore less fruit stay in the basin.
- Integrated water-spraying system provides additional washing when lifting the fruits up the elevator.
- Belt conveyor has a water drainage and speed regulation system.
- Optional replaceable cutting graters/sieves are available for different fruits and berries.
- The mill does not damage the fruit seed.
- Powerful 2.2 kW crushing engine can crush various fruits, berries and vegetables – from soft raspberries to hard apples, beets, etc.
- Machine is entirely made of stainless steel.

Output	kg/h	1000
L	mm	3840
L1	mm	3334
W	mm	630
W1	mm	200
H	mm	2300
H1	mm	1280
H2	mm	700
